**Abstract**

**1. General introduction** ----- 1

Current status of H<sub>2</sub> gas sensors

Background and Scope of the thesis

**2. Hydrogen gas sensor utilizing a high proton affinity of pyrrolopyrrole derivatives** ----- 5

Introduction

Experiment

Operation principle of the H<sub>2</sub> sensor

Device structure

Synthesis and crystal phase used for the sensor

Fabrication of the sensor

Measurements of the sensor performance

Results and Discussion

Performance of the H<sub>2</sub> gas sensor

Mechanism of the reduction in resistivity due to protonation

Conclusions

References

**3. Carrier determination and frequency response of H<sub>2</sub> gas sensors based on dipyridyldiketopyrrolopyrroles** ----- 20

Introduction

Experiment

Samples used for measurements of the Seebeck coefficient

Measuring circuit for the frequency response of H<sub>2</sub> gas sensors

Measuring circuit for the frequency response of H<sub>2</sub> gas sensors

Preparation of H<sub>2</sub> gas sensor

Results and Discussion

Carrier determination

Frequency response of the sensor

Conclusions

References

**4. Polymorph of 1,4-diketo-3,6-bis-(4'-dipyridyl)-pyrrolo-[3,4-c]pyrrole and their hydrogen bond network: A material for H<sub>2</sub> gas sensors** ————— 30

Introduction

Experiment

Sample preparation and crystal growth

Structure analysis

Polarized reflection spectra

Results and discussion

Crystallographic parameters and molecular conformation of DPPP

Molecular arrangement and intermolecular hydrogen bonds

Polarized reflection spectra measured on single crystals

Conclusions

References

**5. Summary and concluding remarks** ————— 42

**Appendices**

I. Structure of *para*-DPPP (phase I) ————— 44

II. Structure of *para*-DPPP (phase II) ————— 50

III. Structure of *orto*-DPPP ————— 54
